Method

item	detail
Recommended AMRs	Maximum of actual AMR route-time workload and 95th percentile AMR route concurrency using target utilisation 85%. Multi-stop payload tasks sharing one route are counted once for fleet demand.
Recommended lifts	Maximum of lift occupancy model and 95th percentile concurrent lift demand using target utilisation 70%.
Lift parsing	Uses segment_type = lift_transfer and parses lift/floor from from_location and to_location.
Idle percentage	Calculated against the full simulation duration for each AMR and each lift.

Location space utilisation

Locations are mapped to departments and service categories from the simulator JSON. Area is calculated from each location bounding box; utilisation compares defined inventory-space area with the location area where inventory spaces are present.

Failed delivery analysis

Failed deliveries are grouped with their logged reason and payload dimensions so capacity failures can be traced back to the attempted load size.

No failed deliveries were identified in the simulation event log.

Location storage recommendations

Recommended area keeps the current location area as a baseline and adds failed payload footprints with a 30% handling allowance. Recommended spaces add capacity-related failed attempts to the current defined inventory-space count.
